## ABOUT

Enthusiastic entry level Full Stack Developer with a passion for software architecture and a keen eye for designing simple functional user experiences, possessing a deep curiosity for understanding how things work and why they work the way they do. Currently developing a full-stack client facing inventory website for a set decoration company.

## APPLICATIONS

### Wagative

A gamified activity and social media web based application for Dog owners that allows users to receive points and level up through live tracking of activities such as runs and walks with their dogs, checking into pet related businesses, as well as interacting with other dog owners. App features developed using Google Maps API, Firebase, and Yelp API

### Backend Product Management

Web based application built for a medical supplies sales company, that allows users to import data from product spreadsheets, reformat the data to match the desired marketplace format and then output that information to be used for streamlined sales process. App developed using MERN stack. Proprietary code for client

### Got Parcel

Package delivery notification web based application for apartment buildings and complexes that streamlines the process of notifying tenants of package deliveries that are being held by the front desk staff. Users notified through email or text message that package has been delivered to front desk and is ready for pick up. Web App developed using MERN stack
